

Classic Instruments Releases a New Direct-fit Package for the 1966-'67 Nova

Boyne City, MI, November 2nd, 2020— Classic Instruments is pleased to announce the release of an all new direct-fit package for the 1966-'67 Nova. The package features a speedometer, tachometer, fuel level, temperature, oil pressure, and volt gauges; along with indicator lights. All the gauges are electronic operation. The fuel gauge is programmable for any ohm range with a selector switch on the back of the cluster. This means the fuel gauge will work with the stock sending unit (0-90 ohm), any other factory sending units, or any Classic Instruments fuel sending unit. The cluster mounts in the original factory bezel and uses the original diffuser plate, both of which will need to be re-used from the customers' original cluster. A new, laser-cut plastic lens is provided with the cluster. Wiring is handled with a single wire harness connection on the back of the cluster and there is a separate connection and harness for an external shift light on the back of the cluster as well. Additionally, the wire harness includes a separate power (12V) and ground lead to allow the customer the flexibility to add things such as a check engine, emergency brake, open door, or low oil pressure indicator. Other lighting includes green turn signal indicators, red warning light, and a blue high beam indicator; all LED. Speedometer calibration is quick and easy with push-button control, and Classic Instruments' Zeus Speedometer Technology is built-in meaning the cluster requires no external control boxes and works directly with ECM or VSS signals. It also has a built-in ECM signal filter switch. The cluster is available in five different colors/series.

This new 1966-67 Nova cluster can be purchased from Classic Instruments direct or through any one of its authorized dealers.

Classic Instruments has been handcrafting in America since 1977. The company offers a full line of catalog order instrumentation for a wide range of Ford and Chevy model cars and pick-up trucks, plus over 100 universal fit instruments. The Classic Instruments' line also includes many specialty items such as performance series instruments, Zeus speedometer technology, and Fuel-Link. Classic Instruments can build virtually anything through their dedicated Instrument Customization Unit. Whether it's a direct-fit set, retro-fit, or complete custom their team is ready to help add The Finishing Touch to any project.
